International Journal of Mass Spectrometry and Ion Processes

Subject Index

Ab initio calculations
Ab initio molecular orbital calculations on 1,2-hydrogen shifts in the ethene, allene and propyne radical cations 27
Alkali metal target
Discrimination of $C_3H_4^+$ isomeric ions by charge inversion mass spectrometry using an alkali metal target 89
Atomic force microscopy
MeV-atomic-ion-induced surface tracks in Langmuir–Blodgett films and L-valine crystals studied by scanning force microscopy 147
Atomizer
Mass spectrometric calibration of an atomizer/nebulizer for doping flames or discharge plasmas 17

Branching ratio
Branching ratios for ion pair formation from CF_3Cl photoexcited in the inner-shell transition regions 45

Calibration
Mass spectrometric calibration of an atomizer/nebulizer for doping flames or discharge plasmas 17
Cesium clusters
Quantification of impurities in brass using secondary ion mass spectrometry: a comparison of matrix effects for CsM^+ clusters and M^+ ions 63
Charge effects
High front-end resolution collision-induced dissociation in Fourier transform ion cyclotron resonance mass spectrometry 97
Charge inversion mass spectrometry
Discrimination of $C_3H_4^+$ isomeric ions by charge inversion mass spectrometry using an alkali metal target 89
Chlorotrifluoromethane
Branching ratios for ion pair formation from CF_3Cl photoexcited in the inner-shell transition regions 45
Chromium speciation
Chromium speciation in aerosols by rapid single-particle mass spectrometry 77
Collision-induced dissociation
Collision-induced dissociation of mass-selected phosphorus cluster cations 55
High front-end resolution collision-induced dissociation in Fourier transform ion cyclotron resonance mass spectrometry 97
Computer simulation
Transmission study for r.f.-only quadrupoles by computer simulation 197
Cross-sections
Absolute and scaled electron-impact ionization cross-sections for hydrogen-, helium-, and lithium-like ions 207

Delayed emission
Particle delayed emission in spontaneous desorption mass spectrometry 35
Desorption mass spectrometry
Particle delayed emission in spontaneous desorption mass spectrometry 35
Discharge plasma
Mass spectrometric calibration of an atomizer/nebulizer for doping flames or discharge plasmas 17
Double-charge-transfer spectroscopy
Calculated and measured double-ionization energies to triplet electronic states of the doubly charged ions of methylamine, dimethylamine and trimethylamine 137
Double-ionization energies
Calculated and measured double-ionization energies to triplet electronic states of the doubly charged ions of methylamine, dimethylamine and trimethylamine 137
Drift tube
Transport properties of Rb^+ ions in Ne and Ar gases 117

Electron-impact ionization
Absolute and scaled electron-impact ionization cross-sections for hydrogen-, helium-, and lithium-like ions 207
Electronic sputtering
MeV-atomic-ion-induced surface tracks in Langmuir–Blodgett films and L-valine crystals studied by scanning force microscopy 147
Ethene radical cations
Ab initio molecular orbital calculations on 1,2-hydrogen shifts in the ethene, allene and propyne radical cations 27

Faraday cup
High precision isotopic measurement of lithium by thermal ionization mass spectrometry 189
Flame
Mass spectrometric calibration of an atomizer/nebulizer for doping flames or discharge plasmas 17
FT-ICR
Open cell analog of the screened trapped-ion cell using compensation electrodes for Fourier transform ion cyclotron resonance mass spectrometry 175

High front-end resolution
High front-end resolution collision-induced dissociation in Fourier transform ion cyclotron resonance mass spectrometry 97
1,2-Hydrogen shifts
Ab initio molecular orbital calculations on 1,2-hydrogen shifts in the ethene, allene and propyne radical cations 27
Hyperthermal surface ionization
Surface ionization mass spectrometry of drugs in the thermal and hyperthermal energy range — a comparative study 159

Inner-shell excitation
Branching ratios for ion pair formation from CF_3Cl photoexcited in the inner-shell transition regions 45
Ion cyclotron resonance
High front-end resolution collision-induced dissociation in Fourier transform ion cyclotron resonance mass spectrometry 97
Ion mobility
Transport properties of Rb^+ ions in Ne and Ar gases 117
Ion probe
Precision and reproducibility of in situ oxygen isotope ratio measurements on quartz obtained using an Isolab 54 ion microprobe 1
Ions
Absolute and scaled electron-impact ionization cross-sections for hydrogen-, helium-, and lithium-like ions 207
Ion transmission
Transmission study for r.f.-only quadrupoles by computer simulation 197
Isobaric interference
Investigations for isobaric interference of ^{238}Pu at ^{238}U during thermal ionization mass spectrometry of uranium and plutonium from the same filament loading 127
Isomeric ions
Discrimination of $C_3H_4^+$ isomeric ions by charge inversion mass spectrometry using an alkali metal target 89
Isotope ratio
Investigations for isobaric interference of ^{238}Pu at ^{238}U during thermal ionization mass spectrometry of uranium and plutonium from the same filament loading 127
Isotopic composition
High precision isotopic measurement of lithium by thermal ionization mass spectrometry 189

Kinetic method
Proton affinity of the stable free radical 2,2,6,6-tetramethyl-l-piperidinyloxy measured by the kinetic method 69

Langmuir–Blodgett films
MeV-atomic-ion-induced surface tracks in Langmuir–Blodgett films and L-valine crystals studied by scanning force microscopy 147
Laser ablation
Electronic state detection/partitioning of atomic nickel during resonant laser ablation 167
Laser desorption/ionization
Chromium speciation in aerosols by rapid single-particle mass spectrometry 77
Lithium
High precision isotopic measurement of lithium by thermal ionization mass spectrometry 189

Magnetron motion
Open cell analog of the screened trapped-ion cell using compensation electrodes for Fourier transform ion cyclotron resonance mass spectrometry 175
Mass distribution
Collision-induced dissociation of mass-selected phosphorus cluster cations 55

Matrix effect
Quantification of impurities in brass using secondary ion mass spectrometry: a comparison of matrix effects for CsM^+ clusters and M^+ ions 63
Microparticle analysis
Chromium speciation in aerosols by rapid single-particle mass spectrometry 77
Monte Carlo simulation
Transport properties of Rb^+ ions in Ne and Ar gases 117

Nebulizer
Mass spectrometric calibration of an atomizer/nebulizer for doping flames or discharge plasmas 17
Nickel
Electronic state detection/partitioning of atomic nickel during resonant laser ablation 167

Open cell
Open cell analog of the screened trapped-ion cell using compensation electrodes for Fourier transform ion cyclotron resonance mass spectrometry 175
Oxygen
Precision and reproducibility of in situ oxygen isotope ratio measurements on quartz obtained using an Isolab 54 ion microprobe 1

Partial yield spectra
Branching ratios for ion pair formation from CF_3Cl photoexcited in the inner-shell transition regions 45
Phosphorus cluster cations
Collision-induced dissociation of mass-selected phosphorus cluster cations 55
Precision
Precision and reproducibility of in situ oxygen isotope ratio measurements on quartz obtained using an Isolab 54 ion microprobe 1
Propyne radical cations
Ab initio molecular orbital calculations on 1,2-hydrogen shifts in the ethene, allene and propyne radical cations 27
Proton affinity
Proton affinity of the stable free radical 2,2,6,6-tetramethyl-l-piperidinyloxy measured by the kinetic method 69

Quantification
Quantification of impurities in brass using secondary ion mass spectrometry: a comparison of matrix effects for CsM^+ clusters and M^+ ions 63
Quartz
Precision and reproducibility of in situ oxygen isotope ratio measurements on quartz obtained using an Isolab 54 ion microprobe 1

R.f.-only quadrupoles
Transmission study for r.f.-only quadrupoles by computer simulation 197
Radial electric field
Open cell analog of the screened trapped-ion cell using compensation electrodes for Fourier transform ion cyclotron resonance mass spectrometry 175
Relative sensitivity factors
Quantification of impurities in brass using secondary ion mass spectrometry: a comparison of matrix effects for CsM^+ clusters and M^+ ions 63
Reproducibility
Precision and reproducibility of in situ oxygen isotope ratio measurements on quartz obtained using an Isolab 54 ion microprobe 1
Resonance ionization mass spectrometry (RIMS)
Electronic state detection/partitioning of atomic nickel during resonant laser ablation 167
Resonant laser ablation (RLA)
Electronic state detection/partitioning of atomic nickel during resonant laser ablation 167

Secondary electron multiplier
High precision isotopic measurement of lithium by thermal ionization mass spectrometry 189
Secondary ion mass spectrometry
Quantification of impurities in brass using secondary ion mass spectrometry: a comparison of matrix effects for CsM^+ clusters and M^+ ions 63
Selective photoion–photoion coincidence
Branching ratios for ion pair formation from CF_3Cl photoexcited in the inner-shell transition regions 45
Stable free radical
Proton affinity of the stable free radical 2,2,6,6-tetramethyl-l-piperidinyloxy measured by the kinetic method 69
Surface ionization
Surface ionization mass spectrometry of drugs in the thermal and hyperthermal energy range — a comparative study 159
Surface tracks
MeV-atomic-ion-induced surface tracks in Langmuir–Blodgett films and L-valine crystals studied by scanning force microscopy 147

Tandem time-of-flight mass spectrometer
Collision-induced dissociation of mass-selected phosphorus cluster cations 55

TEMPO
Proton affinity of the stable free radical 2,2,6,6-tetramethyl-l-piperidinyloxy measured by the kinetic method 69
Thermal ionization
Investigations for isobaric interference of ^{238}Pu at ^{238}U during thermal ionization mass spectrometry of uranium and plutonium from the same filament loading 127
Thermal ionization mass spectrometry
High precision isotopic measurement of lithium by thermal ionization mass spectrometry 189
Time correlation
Particle delayed emission in spontaneous desorption mass spectrometry 35
Time of flight
Particle delayed emission in spontaneous desorption mass spectrometry 35
Transport properties
Transport properties of Rb^+ ions in Ne and Ar gases 117
Trapped-ion cell
Open cell analog of the screened trapped-ion cell using compensation electrodes for Fourier transform ion cyclotron resonance mass spectrometry 175
Triplet electronic states
Calculated and measured double-ionization energies to triplet electronic states of the doubly charged ions of methylamine, dimethylamine and trimethylamine 137
Two-dimensional spectroscopy
High front-end resolution collision-induced dissociation in Fourier transform ion cyclotron resonance mass spectrometry 97
